GAY SPRING COLOR IN THE GARDEN

Malmo's Select Narcissi and Daffodils are all grown in our own Pacific Northwest—the source of the best stock, which is eagerly sought by florists as well as home gardeners. These bulbs from our growing fields are top size, fresh, plump bulbs, that will give the largest and most blooms in your garden. Narcissi should be planted freely in groups to provide a magnificent display in early spring. The exquisite coloring and graceful form of the beautifully shaped trumpets and cups, on long straight stems, have made them favorites for early color in the garden or as cut flowers.

Then remove to north window and add water if necessary.

EXOTIC TUBEROUS BEGONIAS

Beauty for the Shaded Area!

This strain of California Begonias we believe to be the finest available. The strong tubers produce huge, magnificent flowers of perfect form carried erect on strong stems. Their requirements are comparatively simple. If the soil is heavy or hard, add plenty of leaf mold, peat moss or sand, or a mixture of all, so that the ground will be light and porous. Mix in a sprinkling of bone meal. Plant in a shaded spot, as in tree shade or on the north side of the house, and keep well watered (fine overhead sprinkling preferred). To prevent loss of bulbs when

planted early or in cold or wet ground, start in peat in flats indoors in February or early spring; set 3 inches apart, slightly covered. Keep slightly moist in warm, well-lighted place until 3 or 4 inches of growth develop, then plant in pots or in the garden as desired.

JAPANESE PEONIES (Anemone Flowered)

A type deserving the rapidly increasing interest and enthusiasm. The open flowers have extra wide spread and produce enormous quantities of bloom, creating a riot of color in the garden. This group is superb for cutting and arrangements with long-lasting qualities.

MALMO ORGANIC FERTILIZER

THE ORGANIC FERTILIZER FOR EVERY GARDEN USE

The complete natural organic plant food for lawns, roses, shrubs, trees, flowers, vegetables and general garden use. Very rich in necessary plant elements, containing the valuable "rare mineral elements". These rare elements are essential to plant health, good quality and maximum yield, and through vegetables and fruits to human health.

Malmo Organic is not a chemical but an organic food that becomes available naturally through bacterial action as the plants can assimilate it. Its effects are lasting, building the soil as it fertilizes. The proportions of nitrogen, phosphate and potash are high and blended to suit our conditions here. It proves most economical as less need be used than of many other fertilizers.
